Project Title	**Health Policy and the Role of Data and Technology in Healthcare**
Project Area	Health and Well-being
Beneficiary Countries	CM
Source of Funding	Singapore
Approved Budget	USD 100,816.10
Project Description	This course will share Singapore's experience in building a healthcare ecosystem. It will cover Singapore's policy and regulatory framework for community health management and the use of data and technology to improve service quality in healthcare.
Objective	This project aims to help build capacity in CLM countries to better manage community health services and provide quality healthcare services including in the area of chronic disease management and healthcare for the ageing population and to effectively respond, contain and prevent health hazards and threats.
Implementation Status	The trainings were conducted on 23-27 April 2018 and 7-11 May 2018.
