|------------------------------|---|
| <b>Project Title</b>         | <b>Outbreak Detection, Control and Prevention of Infectious Diseases</b>  |
| <b>Project Area</b>          | Health and Well-being   |
| <b>Beneficiary Countries</b> | LM  |
| <b>Source of Funding</b>     | Singapore   |
| <b>Approved Budget</b>       | USD 57,266  |
| <b>Project Description</b>   | This course focuses on sharing Singapore's experiences on managing the outbreak of diseases, drawing lessons from the SARS and dengue virus outbreaks in Singapore. It will cover topics on the theory behind infectious disease investigation, containment and prevention, including ethical considerations in outbreak response and effective use of medical resources. |
| <b>Objective</b>             | This project aims to help build capacity in CLM countries to better manage community health services and provide quality healthcare services including in the area of chronic disease management and healthcare for the ageing population and to effectively respond, contain and prevent health hazards and threats.   |
| <b>Implementation Status</b> | The trainings were conducted on 14-18 May 2018 and 21-25 May 2018.  |
