

Project Title	Disaster Risk Reduction
Project Area	Enabling Action
Beneficiary Countries	CM
Source of Funding	Singapore
Approved Budget	USD 57,706
Project Description	This course will look at Singapore's experience in disaster risk reduction and the Government's approach in formulating the adaptation measures and building community resilience. The focus would not only discussing the theory, but also on institutional development and capacity building to implement plans. The topics will be covered the vulnerability assessment through economic risk analysis, catastrophe assessment and financial management, early warning systems, public health resilience through pandemic preparedness, formulation and implementation of emergency management and evacuation plans, strengthening policy and decision-making processes in crisis situation, sustainable urban planning and development and integration of disaster risk reduction and climate change adaptation measure that enable to develop the policy.
Objective	The course aims to build and enhance the capacity and capability of CLMV countries in handling and managing crises and disasters, strengthen cooperation on disaster management and emergency response and encourage Governments to take an anticipatory approach to handle both current and future challenges.
Implementation Status	The trainings are going to be conducted between June and December 2018.
