PURPOSE

The ASEAN Guiding Principles for Inclusion into or Exclusion from the Negative List of Substances for Health Supplements lists the active substances that are prohibited from being used in or being part of the composition of Health Supplements. This list is prepared from the following guidelines established to govern the acceptance of active substances to the list based on scientific justification.

GUIDING PRINCIPLES

1. A substance must carry a scientifically demonstrated/proven safety concern that its inclusion into a Health Supplements will be harmful to human health¹.
2. A substance that qualifies for inclusion into the list should carry the following details but not limited to:
 - 2.1. Identity of the substance
 - 2.1.1. Taxonomy classification e.g. scientific name by genus and species
 - 2.1.2. Common name
 - 2.1.3. CAS No
 - 2.2. Source of the substance (e.g. natural/synthetic/certain part or whole plant /animal)
 - 2.3. Rationale for inclusion (e.g. toxic² effect of the substance e.g. acute, sub-acute, chronic, specific toxicity)
 - 2.4. References (e.g. formulary, monograph/scientific report)

¹ "Harmful to human health" is defined as any experience affecting the population resulting in any of the following outcomes: death, a life-threatening adverse experience, inpatient hospitalisation or prolongation of existing hospitalisation, a persistent or significant disability/incapacity, or a congenital anomaly/birth defect. Important medical events that may not result in death, be life-threatening, or require hospitalisation may be considered harmful when, based on appropriate medical judgment, they may jeopardise the individual and may require medical or surgical intervention to prevent one of the outcomes previously listed.

²It is important to differentiate between potential side effects and toxic effects

ASEAN Guiding Principles for Inclusion into or Exclusion from the Negative List of Substances for Health Supplements

3. The negative list should only include substances that are prohibited for use in a health supplement.
4. This negative list should not include:
 - 4.1. Substances in the ASEAN List of Restricted Additives and Excipients for Health Supplements.
 - 4.2. Nutrients with established ASEAN maximum levels (e.g. vitamins and minerals).
 - 4.3. Naturally occurring toxic contaminants that are within established limits (e.g. lead).
 - 4.4. Substances which are prohibited under existing wildlife protection laws of all Member States.
5. Prohibited substances in the national regulations of ASEAN Member States, where applicable, are prohibited in Health Supplements. Member States are recommended to propose relevant substances from their national regulation for inclusion into the ASEAN Negative List for Health Supplements; as long as their inclusion meets the criteria set in this guideline.
6. Proposal for inclusion or exclusion of substances into the ASEAN Negative List for Health Supplements should be based on scientific rationale pertaining to human safety concerns.
7. Please refer to Appendix 1 for Negative List of Substances for Health Supplements.
